Indianapolis, IN

EDUCATION

University of Notre Dame | Notre Dame, IN Expected May 2028

B.S. in Computer Science, College of Engineering | GPA: 3.90 / 4.00

Minor: Engineering Corporate Practice

- Relevant Coursework: Data Structures and Algorithms, Systems Programming, Embedded Systems, Discrete Mathematics, Computer Architecture, Technical Writing

EXPERIENCE

BPN Solutions | Indianapolis, IN 2025 – Present

Software Engineer

- Sole engineer on a full-stack job scheduling and profitability platform (Next.js, TypeScript, Node.js, Supabase) for Roots Ops, a landscaping company, so the owner can quote from actual per-job profit margins instead of intuition.
- Built profitability analytics, job scheduling, and automated notifications using cron jobs and Twilio SMS integration, with Supabase handling authentication and the Postgres database.
- Owned a separate fixed-price engagement, translating a non-technical client's requirements into a production refrigerant management system for HVAC technicians.
- Architected a TypeScript Turborepo monorepo (Fastify REST API, Next.js web app, shared domain package) backed by SQL Server, replacing a paper based workflow with an EPA audit-ready system.
- Practiced test-driven development with a 70+ test integration suite against a Dockerized SQL Server; set up CI/CD with GitHub Actions and Vercel with auto-deploy on merge.

Sonablate Corp. | Indianapolis, IN May – July 2025

Software Engineering Intern

- Re-engineered the protected health information (PHI) browser used to manage patient records, migrating the full UI from Java Swing to JavaFX and aligning it with the main application's design system.
- Built encryption, anonymization, and USB-export features for patient records, hardening handling of sensitive medical data to support HIPAA-compliant workflows.
- Integrated PACS (Picture Archiving and Communication System) server functions into the browser's export pipeline, partnering with the Head of IT to connect clinical imaging infrastructure.

PROJECTS

AI Fitness Platform | *FastAPI, PostgreSQL, Next.js, Docker, Dexcom API, Anthropic Claude*

- Built a full-stack platform (FastAPI, PostgreSQL, Next.js) that combines Strava, WHOOP, and Dexcom G7 glucose data and uses the Anthropic API to generate personalized training plans and coaching.
- Engineered an async FastAPI backend integrating four external REST APIs via OAuth 2.0; implemented JWT authentication with bcrypt-hashed passwords and per-user data isolation.

News Sentiment Stock Price Predictor | *PyTorch, FinBERT, pandas, NewsAPI*

- Developed a stock price prediction model in PyTorch combining historical market data (yfinance) with FinBERT news sentiment features engineered in pandas.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, SQL, TypeScript, JavaScript, Bash

Frameworks & Libraries: Node.js, Next.js, React, Fastify, FastAPI, PyTorch, OpenCV, pandas, SQLAlchemy, Tailwind CSS, REST APIs

Tools & Platforms: Git, Docker, AWS, PostgreSQL, Supabase, SQL Server, Twilio, Turborepo, GitHub Actions, Vercel, Linux, Vim

LEADERSHIP & ACTIVITIES

Notre Dame Engineering Summer Program | Rome, Italy Jul – Aug 2025

- Completed coursework in Technical Writing and Professional Ethics; drafted a software proposal to improve bus-arrival-time prediction accuracy for the city of Rome.

Diabetes Youth Foundation of Indiana | Noblesville, IN Summers 2022–2024

- Led a team of six junior counselors and supported campers aged 7–15 in managing type 1 diabetes.
